EDUCATION

Linnaeus University- Vaxjo, Sweden

Expected graduation: June 2027

Bachelor of Science, Software Technology (Computer Science), GPA: 3.69 / 4.0

- Relevant Coursework: Advanced Data Structures and Algorithms, Software Design and Architecture, Operating Systems, Computer Networks, Database Technology, Introduction to Machine Learning, Software Testing.
- AI Society - Vice President, R&D Lead Developer: Led the development of a RAG-enabled AI-Chatbot React.js project and actively competed in technical hackathons.

The Odin Project- Online

July 2023

Full Stack JavaScript

PROJECTS

Clarus Visa Migration Assistant(*React.js, Tailwind CSS, Convex, Vercel AI-SDK*)

[Code](#) **March 2026**

- Architected a serverless React.js SPA using Tailwind CSS and Convex, integrating the Vercel AI-SDK to build a RAG-based chatbot that simplifies the Swedish visa migration process for non-Swedish speakers.
- Engineered an AI translation and filtering layer for the RAG pipeline, reducing multilingual context bloat and cutting observed cross-language answer failures by 99%.
- Led the technical execution as R&D Lead Developer, delivering a highly stable MVP under a strict deadline that was robust enough to be successfully demonstrated on Swedish national television (SVT).

Plant Monitoring System(*Docker Compose, MicroPython, Telegraf, InfluxDB, Grafana*)

[Code](#) **July 2025**

- Architected a full-stack IoT pipeline using MicroPython on Raspberry Pi Pico WH to sample temperature, humidity, light-intensity and soil-moisture every second, then publish via MQTT to Adafruit IO.
- Containerized Telegraf, InfluxDB, and Grafana with Docker Compose, enabling one-click deployment, reducing manual setup steps from 12 to a single command.
- Designed a reusable sensor-abstraction layer in MicroPython, defining a Sensor superclass to reduce code duplication by roughly 40% and simplify the addition of new sensor types.
- Set up a soil moisture alert system via webhooks, allowing faster response times to prevent over or under watering.

AI News Summarizing Application(*Java, JavaFX, PostgreSQL, SQLite, CSS, RSS*)

[Code](#) **June 2025**

- Collaborated in a five-person Scrum team, running weekly sprints, daily stand-ups, sprint planning and retrospectives, delivering a fully functional MVP in five sprints, meeting 100% of client requirements.
- Developed a JavaFX frontend (FXML + CSS) featuring feed toggles, settings screen, toggleable themes, AI summary views and local SQLite caching for offline reading, improving first-load time by an estimated 60%.
- Structured the codebase as a Gradle multi-project to improve build times and enforce clear separation of concerns.

Nar-Slutar-Lektioner.net(*Next.js, TypeScript, Tailwind CSS, Chrome DevTools, Vercel*)

[Code](#) [Live](#) **July 2024**

- Reverse-engineered and documented Skola24's private API by intercepting and analyzing encrypted client requests to reconstruct its proprietary signature-generation and five-step handshake protocol, unlocking programmatic access to school-year and timetable endpoints without access to official documentation.
- Crafted a responsive user interface using Next.js, React Server Components, and Tailwind CSS, achieving an average Lighthouse score of 99 across all categories and reducing the number of clicks to access school schedules from 11 to 2 clicks.
- Leveraged Next.js React Server Components to call Skola24's API on the server-side, bypassing browser CORS restrictions.

OPEN SOURCE CONTRIBUTIONS

- Contributed merged documentation for major open-source packages, including Supabase, Zod, RxJS, and t3-env, used by millions of developers, enhancing the overall developer experience and reducing adoption friction.
- Backported PaneruWM from macOS 26 to macOS 15, expanding compatibility and driving broader user adoption.
- Authored and published two packages on npm, totaling over 8k downloads, streamlining the retrieval of llms.txt files.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, HTML, CSS, SCSS, SQL

Frameworks & Libraries: React.js, Next.js, Tailwind CSS, Node.js, Zod, ExpressJS, HonoJS, DrizzleORM, Convex

Tools & DevOps: Visual Studio Code, Zed, Docker, npm, Vite, Bun, Git, GitHub, REST APIs, AI-Agents, Chrome DevTools

OTHER + PERSONAL INTERESTS

Certificates: AM+B Swedish Drivers License, Forklift License **Citizenships:** Swedish, Hungarian

Personal Interests: Weight Lifting, Muay Thai, Music Production **Languages:** English, Swedish, German, Hungarian
